The T2DM patient with kidney disease – What is going wrong? How can we do better?

One in three T2DM patients will develop kidney disease over their lifetime. Clinicians need to be alert to the possible early presence of kidney disease in their patients and ensure that insulin therapy is selected with the lowest possible hypoglycaemic risk.

Dr Kagiso Motse, Nephrologist in private practice, discusses her experience of the treatment of T2DM patients with kidney disease with *in Conversation* host, Dr Brad Merwitz.

Dr Brad Merwitz
Physician & Endocrinologist
